Dear Mr. McWilliams:

Thank you for the additional information you provided to the agency associated with the vertical flow of site related contamination. In order to get a better understanding of the supporting information our **technical experts need to know the elevation to the bottom of the river** . Please provide the agency with that information Monday, December 12, 2006.

Lastly, although you provided information for the 0.5 acre portion of the site excavation, you changed the parameters of the cost estimate submitted in the RI/FS Report, Revision 3. For example, the agency was interested in a cost estimate to excavate the 0.5 acres in the NW corner of the site, with a soil cover over the other portion (2.0 acres) of the site. The information you provided was to place a stone/asphalt cover over the remainder of the site. Additionally, the parameters changed from 25% and 75% disposal requirements, to 50% and 100%, with the addition of TSCA charges. We will calculate the cost estimate for the 0.5 acre excavation with a soil cover using the original parameters, in addition to the parameters you provided.

If you have any questions or need additional information, please do not hesitate to ask.

Thanks,

Gwendolyn Massenburg
